Task 1 (Mutable Default Argument – Function Bug)

Task: Analyze given code where a mutable default argument causes unexpected behavior. Use AI to fix it.

Bug: Mutable default argument

```
def add_item(item, items=[]):
```

```
    items.append(item)
```

```
    return items
```

```
print(add_item(1))
```

```
print(add_item(2))
```

Expected Output: Corrected function avoids shared list bug.

Task 8 (Import Error – Wrong Module Usage)

Task: Analyze given code with incorrect import. Use AI to fix.

Bug: Wrong import

```
import maths
```

```
print(maths.sqrt(16))
```

Expected Output: Corrected to import math

Screenshots:

The screenshot shows a VS Code editor window with a dark theme. At the top, there is a search bar with the text "correct the code". Below it, a notification bar displays a red 'x' icon and the message "Import 'maths' could not be...". The main editor area shows a Python script with line numbers 46 to 50. Line 47 contains the code "import maths", which is highlighted with a yellow squiggly underline. Line 48 contains "print(maths.sqrt(16))". A tooltip or suggestion box is visible over line 47, showing the corrected code "import math".

The screenshot shows a snippet of the corrected Python code. Line 47 now reads "import math" instead of "import maths". Line 48 remains "print(maths.sqrt(16))". The code is displayed on a dark background with syntax highlighting.

output:

The screenshot shows a terminal window with a dark background. It displays the command prompt "PS C:\Users\91938\OneDrive\Documents\Desktop\AI>" followed by the command "c:: cd 'c:\Users\91938\OneDrive\Documents\Desktop\AI'; & 'c:\Users\91938\AppData\Local\Programs\Python\Python313\python.exe' 'c:\Users\91938\.vscode\extensions\ms-python.debugpy-2025.18.0-win32-x64\bundled\libs\debugpy\launcher' '53439' '--' 'c:\Users\91938\OneDrive\Documents\Desktop\AI\AIAC7_5.py'". The output of the command is "4.0".
